EXCEED

MEDICAL MICRONEEDLING FOR  
CLINICALLY PROVEN RESULTS

## MEDICAL MICRONEEDLING IS CLINICALLY PROVEN TO:

- ✓ Treat acne scarring, in particular, to reduce the depth of scars
- ✓ Normalise the skin structure
- ✓ Minimise fine lines & wrinkles

### OTHER COSMETIC BENEFITS:

- ✓ Skin regeneration
- ✓ Increase natural collagen formation
- ✓ Reduce pore size & improve skin texture

## HOW DOES MICRONEEDLING WORK?

With expert precision, technique and timing, your aesthetician/practitioner will use EXCEED to trigger growth factors for building new collagen. They will create controlled microchannels in the skin which instigate regeneration of skin cells via a natural process of healing. Awakening the fibroblast that lies within the deeper layers of the skin, you will naturally produce new, healthy collagen.

The gentle stimulus provided by medical microneedling is considered far more effective than many other more invasive and expensive skincare treatments. It is a quick and easy technique with little downtime. After a course of treatments your skin is visibly revitalised, rejuvenated, replenished and regenerated.

## A WORLD FIRST

The EXCEED microneedling device has been medically proven to visibly reduce the appearance of wrinkles, skin laxity and uneven skin texture. Safe and effective treatment sessions obtain powerful results within a short procedure time.

## WHAT DOES THE TREATMENT INVOLVE?

Before the microneedling treatment, your face is thoroughly cleansed and prepared. Following this, an anaesthetic cream may be applied at the discretion of your aesthetician/practitioner. The process itself is nearly painless; the needles only penetrate the top layer of the skin plus the speed & depth of penetration can be adjusted by the operator based on your level of comfort, ensuring a great experience plus optimal results.

Immediately after your treatment there will be visible redness on the treatment area which can be easily covered post treatment. Most inflammation will have disappeared one day after the procedure. Whilst patients should avoid direct sunlight in the first days after a microneedling treatment, it's possible to go back to work immediately.

The EXCEED safety cartridge system is the global first to guarantee a 100% sterile package. Your safety and results are our priority!

## HOW OFTEN SHOULD YOU HAVE A MICRONEEDLING TREATMENT?

This is very patient specific, such that your skin type and condition will indicate your number & frequency of treatments as determined by your aesthetician/practitioner.

In general, most patients undergo 3-6 treatments at intervals of four to eight weeks. Following this, a maintenance plan will then be created to sustain your results.
